CASE 5-4-2-17

TITLE Reducing Scintillation Effects for Optical Free-Space
Transmission

APPLICATION NUMBER 09/839,486

FILING DATE 04/23/2001

THE COMMISSIONER FOR PATENTS

SIR:

AMENDMENT

Please cancel claims 14-19.

Please add claims 20 – 32 as follows:

- 1 Claim 20. Apparatus for transmitting a transmission payload data bit-stream
- 2 through an optical free-space medium, said apparatus comprising:
 - 3 means for encoding an optical transmission payload data bit-stream
 - 4 into codewords using Reed-Solomon encoding;
 - 5 means for fragment said codewords into sequences of segments;
 - 6 a buffer store comprising SDRAM devices for storing physical pages,
 - 7 each said SDRAM device having a cycle rate including a
 - 8 READ rate and a WRITE rate, said SDRAM device being both
 - 9 readable and writable at said cycle rate, and
 - 10 each said SDRAM device matrix of memory cells having a
 - 11 defined repeating x-y row-column submatrix, each for containing a
 - 12 single one of said physical pages;
 - 13 means for interleaving successive blocks of codeword segments into
 - 14 successive said x-y submatrices in WRITE operations having a first page-
 - 15 change overhead operation;
 - 16
